Performance Optimisation package

Maersk Drilling's Performance Optimisation package is designed to help you optimise your entire drilling operation – not just our part in it. A team of our experts look closely at every detail of the operation and bring their experience and insight to bear by optimising all aspects including logistics, timings, contractors and equipment. It's a proven methodology that consistently results in a more efficient, more consistent and safer operation across the board.

The Performance Optimisation package is the most powerful tool we have to look holistically at your drilling operation, identify inefficiencies and solve them fast. It is so effective because it brings together a number of different consulting and insight services into one highly effective end to end function:

1. Campaign planning is optimised through expert input.
2. The full team comes together to scrutinise plans before the operation begins.
3. Performance during the operation is constantly reviewed and improved.
4. After the operation is complete the lessons learned are captured, prioritised and published in highly actionable form.

Why the package is so effective

The Performance Optimisation package delivers powerful synergies by bringing together key Maersk Drilling experts who collaborate with instinctive efficiency to deliver enhanced results. These highly experienced professionals share the same service mindset, the same One Team culture and the same understanding of processes, and all have access to the same fleet-wide data.

A drilling operation is a highly complex task. It involves hundreds of people, thousands of interacting processes and an array of sophisticated technologies. With this degree of complexity, it's almost impossible to stop inefficiencies creeping in unnoticed. That's why Maersk Drilling's Performance

Smarter Drilling for Better Value

Efficient well delivery drivers achieved with this service:

Reduce Waste

Increase Certainty

Reduce Time

Key benefits

- Reduce cost
- Improve quality
- Improve safety
- Enjoy a convenient service

Save time

Savings could be as much as

30%

on a longer campaign

Optimisation package exists. It is the most powerful tool we have to identify inefficiencies and solve them fast.

What the Performance Optimisation package includes

Each of these elements offers benefits on its own, but when they're combined each one multiplies the benefits of the other through a series of powerful synergies.

Senior Drilling Advisor

From early in a campaign the Senior Drilling Advisor draws on their rig knowledge and experience of similar operations to identify key risks and opportunities. They work closely with your drilling engineers onshore to optimise the drilling programme during planning and implementation.

Drill Well On Paper (DWOP & eDWOP)

A highly focused exercise that ensures those responsible for the operation come together before drilling starts to scrutinise the plans, optimise every step and tackle showstoppers. The Senior Drilling Advisor takes ownership of many of the actions. Our eDWOP is a highly effective online version of the workshop, without the need to meet face to face.

Performance Lead

Hits the ground running after the DWOP, focusing on the risks and the opportunities we've already identified. They work offshore to drive day to day performance management. They're in frequent contact with the Senior Drilling Advisor.

After Action Review (AAR & eAAR)

The After Action Review is a thorough analysis of the campaign that ensures all the important learnings are captured and discussed – for the benefit of your future campaigns. Key inputs into the AAR include those from the Senior Drilling Advisor and Performance Lead. Our eAAR is an online version of the powerful and efficient AAR.

The Performance Optimisation package is the best way to ensure your operation is completed ahead of target, safely and under cost.
