Senior Drilling Advisor

Working in your office throughout planning and execution, the Senior Drilling Advisor brings unrivalled rig-specific experience to focus on one goal: optimising the quality and efficiency of a drilling operation on your behalf, whilst never compromising on safety.

Maersk Drilling's Senior Drilling Advisors are your in-house technical expert, helping solve challenges, optimise operations and answer questions more quickly and efficiently than would otherwise be possible. With operations typically becoming more complex, this is an increasingly valuable role.

Senior Drilling Advisors have extensive offshore drilling experience combined with first-hand knowledge of the rig undertaking the operation. They not only understand how to extract the greatest possible value from crew and equipment but also have access to the accumulated knowledge and insight across the Maersk Drilling fleet. Their single-minded focus is to improve the operation's performance.

The Senior Drilling Advisor also acts as an interface between office and offshore teams, and can represent you the customer while dealing with vendors.

This is a unique role offering unique benefits that only Maersk Drilling can deliver.

Role in detail

From the start of the planning phase of a drilling operation, the Senior Drilling Advisor works closely with your drilling engineers to advise on the best use of our rig. During execution they will monitor and optimise operations, liaising closely with our team offshore, as well as concentrating on forward planning for you and for third party suppliers.

Smarter Drilling for Better Value

Efficient well delivery drivers achieved with this service:

Reduce Waste

Increase Certainty

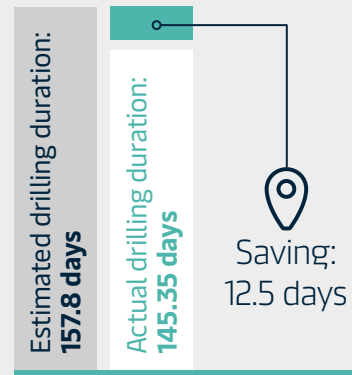

Reduce Time

Key benefits

- Reduce time on well
- Reduce operational expenditure
- Maximise utilisation of people and equipment
- Improve safety
- In-house focal point for solving drilling related issues

Example from a drilling operation Norwegian North Sea

The Senior Drilling Advisor must promote a 'One Team' approach

Planning

- Working through and optimising every detail of the plans
- Identifying opportunities for efficiencies, such as areas where activity can be done offline
- Highlighting potential show-stoppers
- Problem-solving as issues emerge

Execution

- Monitoring the operation and introducing measures to improve performance and reduce costs
- Acting as a first point of contact, allowing the offshore team to focus on the operation
- Becoming a bridge between you and the rig team
- Acting on your behalf when dealing with third party suppliers, optimising their involvement in the operation
- Promoting a 'One Team' approach

Senior Drilling Advisor's skillset

- Extensive rig specific knowledge
- A proven track record offshore
- Several years' experience in a senior position on a rig
- A commercial mindset
- Substantial experience interacting with customers

Can a Senior Drilling Advisor make a difference to your drilling operation?

Talk to us to find out more about how a Senior Drilling Advisor can benefit your project. We can even put you in touch with one of our Senior Drilling Advisors to give you a first hand understanding of what he can offer.
